

# ANSHUMAN VERMA

## Lead Full-Stack Engineer | Python, AI Integration & Cloud Architecture

anshuman.verma@email.com • +1 (555) 019-2834 • github.com/anshumanverma • linkedin.com/in/anshuman-verma • Remote / Worldwide

### PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with 10+ years of engineering experience delivering enterprise web applications, high-throughput microservices, and AI-driven workflows. Proven record at **HCL Technologies** leading backend delivery and cloud platform automation for Fortune 500 clients, including Telstra and Cisco Systems. Demonstrates extensive freelance success engineering autonomous data pipelines, LLM/GenAI integrations, and reactive web platforms utilizing FastAPI, LangChain, React, Angular, and containerized cloud services.

### TECHNICAL EXPERTISE

|                                |                                                                                                                               |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>AI &amp; LLM Systems:</b>   | LangChain, OpenAI & Claude APIs, RAG Architectures, Vector Search, Function Calling, Prompt Engineering, n8n Automation       |
| <b>Backend &amp; APIs:</b>     | Python (FastAPI, Flask, Django), Java (Spring Boot), Node.js, RESTful Architecture, WebSockets, Asynchronous Workers (Celery) |
| <b>Frontend &amp; UI:</b>      | React.js, Angular, TypeScript, JavaScript (ES6+), HTML5, Tailwind CSS, Redux, Responsive UI/UX Design                         |
| <b>Data &amp; Scraping:</b>    | Pandas, NumPy, BeautifulSoup, Selenium, Dynamic DOM/AJAX Extraction, Structured JSON/CSV Pipelines, ETL Processing            |
| <b>Cloud, DevOps &amp; DB:</b> | Docker, Docker Compose, AWS (EC2, S3), Jenkins CI/CD, Ansible, Chef, Linux/Bash, PostgreSQL, MySQL, Redis, Git                |

### PROFESSIONAL EXPERIENCE

**Freelance Full-Stack & AI Solutions Engineer** | Independent Consultant (Remote) Sep 2020 – Present

- AI & LLM Workflows:** Engineered GenAI solutions using LangChain, OpenAI, and Claude to automate unstructured document analysis, contract clause extraction, and structured JSON generation.
- Full-Stack Applications:** Developed reactive SPAs in **React and Angular** integrated with async **FastAPI / Python** backends, implementing JWT/OAuth2 authentication and role-based access control.
- Data Ingestion & Extraction:** Built resilient scraping pipelines with Selenium and BeautifulSoup to navigate complex SPAs, handle dynamic AJAX rendering, and extract large-scale web datasets.
- Data Transformation & Validation:** Implemented Pandas-based ETL workflows for data cleaning, schema validation, and synchronized persistence across relational and NoSQL storage layers.
- DevOps & Containerization:** Containerized applications via Docker and established Jenkins CI/CD pipelines deploying directly to AWS EC2 and Linux environments.

**Technical Lead / Backend Lead** | **HCL Technologies** (Client: Telstra, Australia) Feb 2017 – Sep 2019

- Cloud Console Engineering:** Directed backend feature delivery for Telstra's enterprise Cloud Service Management Console, translating client requirements into scalable multi-tier backend services.
- Infrastructure Automation:** Built Python and Java automation tooling interfacing with VMware vSphere SDKs to streamline virtualized cloud resource allocation and metrics monitoring.
- Continuous Integration:** Automated build, testing, and deployment pipelines using Jenkins and Maven on Linux, reducing production release lead times by 35%.
- Technical Governance:** Formulated API interface specifications, conducted architectural impact assessments, and enforced code quality benchmarks through comprehensive peer reviews.

**Senior Technical Lead / Full-Stack Developer** | **HCL Technologies** (Client: Cisco Systems, USA) Jan 2015 – Jan 2017

- Portal Modernization:** Led engineering for Cisco management portals, building JSON-based REST APIs and dynamic JavaScript/AJAX client interfaces to govern enterprise networking infrastructure.
- Automated Provisioning:** Created modular environment configuration playbooks using Ansible and Chef, standardizing multi-tier testing environments and eliminating setup drift.
- Containerization:** Integrated Docker containers into automated Jenkins test pipelines, improving local/cloud parity and accelerating defect discovery cycles.
- Source & Release Management:** Managed Git repositories, implementing robust branching models, pull request policies, and automated build verifications across cross-functional teams.

### EDUCATION

**Bachelor of Technology (B.Tech) in Electrical Engineering**

Graduated: 2006
