

ANSHUMAN VERMA

Software Engineer | Python • Docker • REST APIs • Backend Automation

LinkedIn: [ADD YOUR LINKEDIN URL] | Remote / Contract

PROFESSIONAL SUMMARY

Software engineer and full-stack/data automation developer with 5+ years of recent freelance experience building Python-based automation, REST API integrations, scalable data-processing workflows, and SaaS applications. Hands-on with Docker, Git, Jenkins, AWS/Linux, JSON/CSV, Pandas, Selenium, and BeautifulSoup. Earlier technical-lead experience includes backend development, CI/CD, cloud automation, and production delivery for enterprise clients including Telstra and Cisco. Comfortable owning tasks end-to-end, debugging independently, and delivering in remote environments.

CORE SKILLS

Backend & APIs: Python, Java/J2EE, REST APIs, JSON, backend services, automation scripting

Containers / DevOps: Docker, Jenkins, Ansible, Maven, CI/CD, Linux, AWS, TeamCity

Data & Automation: Pandas, BeautifulSoup, Selenium, web/API data extraction, CSV/JSON, data cleaning & validation

Development: Git, scalable multi-tier applications, error handling, retries, logging, modular pipelines

Frontend / Additional: React, Angular, Vue, JavaScript/TypeScript, HTML5, CSS, PHP/Laravel

AI-Assisted Work: Basic LLM usage and prompt-based automation

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer / Data Automation Engineer | Multiple Clients (Remote) | Sep 2020 – Present

- Built Python automation scripts and reusable pipelines to collect, transform, validate, and deliver structured data from web platforms and REST APIs.
- Developed data extraction workflows for dynamic sites using BeautifulSoup, Selenium, AJAX handling, pagination, and infinite scrolling.
- Integrated REST APIs and JSON-based services; processed and delivered datasets in JSON and CSV using Pandas-based cleaning and normalization.
- Containerized and deployed automation workflows with Docker and supported CI/CD using Jenkins across AWS/Linux environments.
- Implemented reliability features including error handling, retries, logging, validation, and modular components for scalable data collection.
- Developed and maintained multi-tier applications with Python/Java backends and React/Angular frontends, including API integration.

Backend Lead / Developer | Telstra, Australia | Feb 2017 – Sep 2019

- Led backend delivery and enhancements for a Cloud Service Management Console, including requirements analysis, component impact assessment, and implementation.
- Developed automation tooling and worked with Python, Java, Jenkins, Maven, VMware vSphere SDK, JavaScript/AJAX, and Linux-based environments.
- Supported build/deployment automation and source-control workflows for enterprise cloud-management features.

Senior Technical Lead / Developer | Cisco, United States | Jan 2015 – Jan 2017

- Enhanced a Cisco management portal backed by JSON-based RESTful APIs and maintained Git repositories with standard branching and merge workflows.
- Built and maintained automated CI/build processes using Jenkins; used Ansible and Chef for application and environment configuration.
- Worked with Docker, Python, Java, Linux, Maven, Git, JSON, and cloud/virtualization automation; delivered features from requirements through client acceptance.

SELECTED RELEVANCE TO PYTHON + DOCKER ROLE

- Python: automation, API integration, data processing, scraping, validation, workflow scripting, and backend support.
- Docker & DevOps: containerized workflows plus Jenkins-based CI/CD, Linux/AWS deployment, Ansible automation, and Git-based delivery.
- REST APIs: hands-on integration and development experience with JSON-based APIs across freelance and enterprise projects.
- Remote execution: 5+ years delivering freelance/remote projects with end-to-end ownership and independent task completion.

EDUCATION

Bachelor of Technology (Electrical) | 2006
